- UMN NE Weekly Seminar: "Neutron Skins from Neutron Scattering: How well do we understand Asymmetry-Dependence?" - Dr. Cole D. Pruitt, LLNL

tuesday, Feb 23 2021 @ 2pm MST: https://unm.zoom.us/j/96858073076 (Meeting ID: 968 5807 3076 Passcode: UNM_NE501)
Abstract: Many fundamental questions of nuclear physics (where is the neutron dripline? where and how does the r-process occur?) hinge on how nuclear changes as a function of asymmetry. Neutron elastic and inelastic scattering measurements on stable targets help constrain reaction-model asymmetry-dependence by providing information complementary to that from facilities like FRIB. This seminar will detail our recent campaign of isotopically-resolved neutron total cross section measurements on O-16,18, Ni-58,64, Sn-112-124 at the Los Alamos Neutron Science Center (LANSCE) and our implementation of the Dispersive Optical Model (DOM), which connects these experimental cross sections to nuclear structure. From our DOM analysis, we make predictions for the neutron skin thicknesses of several cornerstone nuclei, then identify some major hurdles for the next generation of optical models needed to navigate FRIB era.
