

AeroTek

Entry Level Engineer

Requirements

- **Bachelor's Degree**
- **Knowledge of Design**
- **Ability to perform Calculations**

The design engineer will be managing up to 50 jobs and producing 7 work orders per week. They will be managing their own projects and be in charge of all design and permitting documentation involved with the project.

The client is seeking college graduates and mid level engineers ranging in education from electrical, civil, mechanical, geographic information systems, computer software (basically any type of engineering degree).

Moreover, they are seeking competent individuals that have sense of urgency and aptitudes that allow them to learn calculations, design software, permitting documentation, and customer specifications quickly and not have to be retaught processes.

They will be performing work for a utility in New Mexico. The utility will call out line extensions, line rerouting projects, resizing transformer and re conductor work, etc. They will be running with smaller job given by the utility and performing design, calculations, permitting and managing progression in the project.
